

# What's happening with Legacy Linux Academy Content?

When Linux Academy and A Cloud Guru combined course catalogs in late 2020, several courses were officially retired from the Linux Academy platform. Courses are retired due to several factors, like a certification no longer being available or a course needing a more up-to-date replacement.

Based on customer feedback, we kept a few 'legacy' courses available for Linux Academy customers to continue learning.

Current Linux Academy customers will continue to have access to retired courses until they move to the ACG platform, at which point the retired courses will no longer be available.

Where we felt a replacement was more up-to-date or relevant for our learners, we have made that available in the A Cloud Guru platform, and you can find the course name below.

Where there is not a replacement course, these courses are no longer being updated with the latest information for the topic. Learners can utilize the advanced search (at the top of the learner dashboard) to find the most current content for the topic.

## Courses that are visible and labeled 'legacy' in the Linux Academy Platform

Course Title	Replacement Course*	Reason for No Replacement
Amazon EKS Deep Dive	EKS Basics	
Microsoft Azure Administrator - Exam AZ-103	AZ-104 Microsoft Azure Administrator Certification Prep	
AWS Certified Solutions Architect - Associate Level	AWS Certified Solutions Architect Associate SAA-C02	
AWS Certified Security - Specialty Certification	AWS Certified Security - Specialty 2020	
Ubuntu Server and Desktop Essentials	Not a direct replacement: Linux Foundation Certified System Administrator (LFCS)	
Evaluate and Perform Server Migration to Azure	Migrating Servers to Azure	
Implement and Manage Application Services (Azure)	AZ-104 Microsoft Azure Administrator Certification Prep	
Microservice Applications in Kubernetes	Kubernetes Essentials	
Launch Your First OpenShift Operator	Introduction to OpenShift	
OpenStack and Containers		Not continuing with openstack content.
Extending Chef Badge		Badge program has been deprecated. New cert course is currently in production to replace.
OpenShift on OpenStack		Not continuing with openstack content.
<i>Deploy and Manage OpenStack on Ubuntu - Pike</i>		Not continuing with openstack content.
CoreOS Essentials		No replacement course is planned at this time - very little demand from customers/prospects.
Elastic Stack Essentials (Legacy)		
Chef Local Cookbook Development Badge	Chef - The Local Cookbook Development Badge	Badge program has been deprecated. New cert course is currently in production to replace.
PostgreSQL 9.4 Administration	PostgreSQL Administration Deep Dive
